THIS IS UNEVALUATED INFORMATION. SOURCE GRADINGS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE.

Kozjak Radar Station 50X1-HUM

1. In the vicinity of Split, a new radar station was built on Kozjak Mountain (height 780) in 1958-1959. The station is installed in a one-story building of very solid construction, with a deep basement. In the vicinity there is another small building where are located a diesel motor and electric generator for emergency power, since the station utilizes electricity from the civilian power lines. A 50X1-HUM telephone line also runs into the zone.
2. the station carries out normal radar service for military aviation.
3. On the slightly inclined roof of the building a radar antenna is mounted; this is half-moon shaped with a diameter of about 1.5 meters (similar to those used on ships).
4. The station is not equipped with all of the necessary equipment because there should also be a television repeater. This repeater does not work well and recently there has been criticism directed at the television authorities, requesting the relocation of the repeater in the Mosor area instead of in the Klis area.
5. Captain Serjak (fnu) was commanding officer, and Lt. Mirolsav Bujic was deputy in December 1962; 3 or 4 noncommissioned officers and about 15 airmen were assigned to the station.

50X1-HUM

6. The station was built with military and state postal funds, with the former accounting for 2/3 of the total amount.
7. A new military road for jeep traffic was built in the area.

Labistica Radar Station and Television Repeater Station

8. In the Labistica area, above the town of Trogir (N 43.32/E 16.15), the completion of another radar and television repeater station is under way. Work on the installation was begun in early 1961 and is now in the completion stage.
9. The station is called "Stanica Labistica" and is located in a one-story building about 12 x 8 meters in size. On the roof there is a circular antenna with a diameter of 2 - 2.5 meters. Just below this building, which is almost on the summit of Labistica, two buildings are in the final stages of construction; one is for technical television equipment and the other to house the radio television personnel. Military personnel, on the other hand, live in the first building described.
